

# Sticky Notes Application – CRUD Operations

**Create:** Users can create a new sticky note by submitting a form containing the note title and content. The data is sent via an HTTP POST request to a Django view, which validates the input and saves it to the database.

**Read:** Users can view all existing sticky notes on the home page. The Django view retrieves notes from the database and passes them to the template for rendering.

**Update:** Users can edit an existing sticky note by navigating to an edit page. The form is pre-filled with the current note data, and upon submission, the updated information is saved to the database.

**Delete:** Users can delete a sticky note by clicking a delete link or button. The Django view removes the selected note from the database and redirects the user back to the home page.
